### **WHAT IS ALL OF US?**

The National Institutes of Health's *All of Us* Research Program is working to enroll at least one million people who reflect the diversity of the United States, including people and communities who have been left out of medical research in the past. The dataset equips researchers to make discoveries that will enable more precise approaches to care. For more information, visit: <https://researchallofus.org>.

### **IGNITE VISION AND MISSION**

At IGNITE, we strive to increase the diversity of the researchers accessing the *All of Us* Researcher Workbench. In collaboration with our community, clinical, and academic partners we find ways to use the *All of Us* data to contribute to the science of community engagement and to improve community health. We are launching a national model using successful and evidence-based engagement strategies to connect researchers, including researchers who have not been represented in the biomedical workforce, from academic institutions and community organizations, to the *All of Us* Researcher Workbench for conducting research projects that aim to improve the quality of life and well-being of community members.
